

## UGC NET Paper-1 - Previous Years Question Papers

In any UGC NET exam, you will find large number of questions appearing from previous papers. So whatever sources/books/websites/coaching you are preparing from, going through previous papers is a MUST.

So, how to make best use of these question papers? Start solving papers one by one. While solving each question, try to understand the “entire concept” not just the given “question”. For example, if question is:

**Brain storming as a method can be used for:**

**(A) Out-of-box thinking (B) Coherent thinking (C) Generate new ideas in the area of interest (D) Critical thinking**

Now do not just look for the Answer (Option C)? Also find out, what exactly are these terms? What does each term mean and what all is included in its description? Do not just solve the particular question...Learn the Concept...Questions will not repeat in next exam...Concepts will repeat...You should be equipped to handle any question on career, just because you did one question.

Please mind it that, it will take time. May be 8-10 hours for each paper.... But if you attempt all previous years' papers with this approach, no one can stop you from getting very good score in UGC NET.

Human Peritus courses have been designed with this approach only. By doing it over the years, we have reached a stage, where consistently more than 85-90% of questions in the exam, are from our course. Check the website of HUMAN PERITUS, to understand how thousands of students are clearing UGC NET with us.

Read the passage carefully and answer the questions that follow:

More generally, today's business-to-business marketers are using a wide range of digital and social marketing approaches from websites, blogs, and smartphone apps to mainstream social networks such as Facebook, LinkedIn, YouTube, and Twitter to reach business customers and manage customer relationships anywhere, anytime. Digital and social marketing has rapidly become the new space for engaging business customers. Business-to-business e-procurement yields many benefits. First, it shaves transaction costs and results in more efficient purchasing for both buyers and suppliers. E-procurement reduces the time between order and delivery. And a Web-powered purchasing program eliminates the paperwork associated with traditional requisition and ordering procedures and helps an organization keep better track of all purchases. Finally, beyond the cost and time savings, e-procurement frees purchasing people from a lot of drudgery and paperwork. In turn, it frees them to focus on more strategic issues, such as finding better supply sources and working with suppliers to reduce costs and develop new products.

The rapidly expanding use of e-procurement, however, also presents some problems. For example, at the same time that the Internet makes it possible for suppliers and customers to share business data and even collaborate on product design, it can also erode decades-old customer-supplier relationships. Many buyers now use the power of the Internet to pit suppliers against one another and search out better deals, products, and turnaround times on a purchase-by-purchase basis.

E-procurement can also create potential security concerns. Although home shopping transactions can be protected through basic encryption, the secure environment that businesses need to carry out confidential interactions is sometimes still lacking.
